

Advantage Release 6.98.02

Release Date: 04/23/2025

Fixed Issues

1776	Project Management Reports	Fixed the issue in the Project Hours report Excel export where large Job Numbers over 3 digits were formatted incorrectly. Job Numbers are now consistently exported as plain numbers, such as 12345, in the correct format on all rows.
2925	Broadcast Worksheet → Order Forms	Fixed the issue where TV or Radio order forms would not display the minutes if the time input was between 12:01 PM–12:59 PM.
3190	Media Planning → Printed Internet Orders	Fixed the issue where long comments or instructions were cut off when creating the order and not displaying on the printed internet order form.
3637	Advantage Services → QvA Alerts	QvA alerts are now correctly delivered to the intended recipients based on configured alert groups, fixing the issue where some users were not receiving notifications.
3979	Timesheets	Fixed the issue where the <i>Employee Only</i> checkbox in Timesheet Entry Details incorrectly filtered time entries for a selected employee when the <i>Quote vs</i>

		<i>Actual</i> option was selected.
4125	Broadcast Worksheet Order and Makegood portal	Made some minor changes to speed up the Order and Makegood portal.
4164	Assignments & Alerts Manager	Fixed the issue where the Hours column in the A&AM displayed a blank value for Assignments (Routed, Non-Routed, and Proofing). The Hours column now prioritizes allocated hours when available. If allocated hours are unavailable, allowed hours are displayed instead. If neither allocated nor allowed hours exist, the Hours field remains blank. This fix extends the previous resolution for Tasks to also include Assignments.
4194	Internet Orders	Fixed the issue where updated media orders to actual were clearing the tactic and channel from the order lines.
4209	Accounts Payable	Fixed the bug causing an invalid date range error or time reverting to 12:00 AM when inputting abbreviated spot times in AP Invoice TV/Radio Details.
4214	Proofing	Fixed the issue where <i>@mention</i> notifications were not sent for comment replies.
4228	Agency Builder	Fixed the issue in the Agency Builder where changes to the Default Posting Period Range were not saving.
4229	User Security	The informational message for a password change is updated to include a comprehensive list of special characters that are prohibited in passwords.

4254	Assignments and Alert Manager	Fixed the issue where numerical search terms were working incorrectly in the Assignments and Alerts Manager.
4287	Billing → Reports → Billing Reports	Fixed the issue with Billing Report #13 not generating a report.
4305	Vendor Maintenance → Push to Edenred	Fixed the issue where existing vendors that already had ACH details were not updating properly on the Edenred side.
4311	AdvantagePay	Fixed the issue validating the wrong vendor email address in Vendor Maintenance, causing a message that there was required missing data.
