

## Advantage Release 6.98.03

Release Date: 05/21/2025

### Fixed Issues

---

4035	Invoicing	Fixed the issue where emailing a draft invoice with a cover sheet incorrectly included job descriptions from other billing selection batches. Now the cover sheet accurately displays only the job descriptions associated with the selected invoice batch.
4102	Alert Groups	The <b>Webvantage</b> job form now defaults to <i>[None]</i> in the email field when a Client/Division/Product does not have a default alert group configured. In Advantage, the <b>Email</b> field is now blank when no default alert group is selected for the product. Hidden alert groups are no longer selectable in either <b>Webvantage</b> or Advantage.
4227	Webvantage Estimations/POs	Fixed the issue where PDF attachments generated from Estimates or Purchase Orders via the alert system were pixelated.
4355	Quickbooks	Updated the Intuit SDK to version 14.7.0 to ensure continued compliance with Intuit's requirements.
4356	Proofing	Fixed the issue where the approval action sometimes

		required multiple clicks to register. Approvals are now processed consistently as expected with a single click.
4365	Media Plan	Fixed the issue in the Media Planning module where reactivating an inactive media plan would not persist upon refresh or when copying the plan, causing it to revert to an inactive state.
4367	Broadcast Worksheet/Traffic for Canadian Worksheets	Removed the restriction from trafficking in the Broadcast Worksheet for Canadian Worksheets.
4394	Month-end reporting Media WIP	Fixed the issue where generating Month-End Media WIP reports caused the database to freeze, preventing the report preview from loading.
4408	Comscore	Fixed the issue where posting with March 2025 Comscore data in WS 48 failed due to the day of the week not being populated from the spot run date, which prevented the post buy report from running correctly.
